1. Executive Summary

The DynaTech AI Chatbot is an educational conversational assistant designed to teach users fundamental Artificial Intelligence concepts and assess their understanding through topic-based multiple-choice quizzes. It is built on the Botpress Cloud platform and deployed via a publicly accessible shareable webchat link.

The chatbot serves a single, focused purpose: a user prompts an AI topic they wish to learn about; the bot presents a concise lesson on that topic, and then a user can ask for a multiple-choice quiz to test their knowledge on a specific topic. Upon completion of the quiz, the user receives a closing acknowledgement message.

Some of the AI topics covered are Machine Learning, Deep Learning, Natural Language Processing (NLP), Computer Vision, Neural Networks, AI Ethics, Prompt Engineering, and Generative AI.

2. Platform Selection & Implementation Approach

2.1 Selected Platform: Botpress Cloud

The chatbot is implemented on Botpress Cloud, a visual conversational AI development platform. The following table justifies this selection against the specific requirements of an educational quiz chatbot.

Selection Criterion	Justification
Visual Flow Builder	Botpress Studio's drag-and-drop canvas allowed the developer to design the topic selection menu, lesson delivery, and quiz question sequences without writing complex backend code.
Quick-Reply Buttons	Botpress natively supports interactive quick-reply to buttons, which are ideal for presenting multiple-choice quiz options and topic selection menus in a clean, tap-friendly format.
Conversation State Management	Botpress tracks conversation variables across turns, enabling the bot to know which topic a user selected and which quiz question they are currently on.
No Infrastructure Required	Botpress Cloud is a fully managed SaaS platform. No server setup, hosting, or DevOps work was required - the bot is deployed instantly via a shareable webchat URL.

Free Tier Availability	The educational scope of this chatbot falls comfortably within Botpress's free tier, making it a cost-effective choice for an internal or academic project.
Shareable Webchat Link	Botpress generates a ready-to-use, embeddable webchat link (v3.6) enabling immediate access by any user with a browser - no app download or login required.

2.2 Implementation Approach

The chatbot was built using a straightforward three-step approach within Botpress Studio:

Step 1 - Topic Menu Design: A welcome flow was created presenting the user with a menu of eight AI topics via quick-reply buttons. Each button routes to the corresponding topic flow.

Step 2 - Lesson & Quiz Flows: For each of the topics, a dedicated flow was built containing a brief educational description of the topic followed by a series of multiple-choice quiz questions. Each question is presented with selectable answer options.

Step 3 - Quiz Completion: Upon answering the final question in a topic's quiz, the bot delivers a closing message - 'Well done, you have completed the quiz' - ending the conversation flow for that topic.

3. Implemented Q&A Pairs

The table below documents all Q&A pairs implemented across the AI topic flows. Each topic includes a teaching segment followed by multiple-choice quiz questions. The answer options presented to users are listed under each question.

Examples:

3.1 Machine Learning

	Quiz Question	Answer Options
1	What is Machine Learning?	a) A type of computer hardware b) A type of AI where systems learn from data c) A programming language
2	Which of these is an example of Machine Learning in everyday life?	a) Using a calculator b) Email spam filters c) Writing a letter by hand
3	Which of these is a type of Machine	a) Unsupervised Learning

	Learning where the model learns from labeled data?	b) Supervised Learning c) Reinforcement Learning
--	--	---

3.2 Deep Learning

	Quiz Question	Answer Options
1	What is Deep Learning?	a) A type of AI that uses layered neural networks to learn from data b) A way to store data in a deep ocean c) A programming language
2	Which of these is a key building block of Deep Learning models?	a) Neural Networks b) Spreadsheets c) Web Browsers
3	Which of these is a real-world application for Deep Learning?	a) Image recognition in smartphones b) Writing with a pencil c) Sending a postcard

3.3 Natural Language Processing (NLP)

	Quiz Question	Answer Options
1	What does NLP stand for in Artificial Intelligence?	a) Natural Language Processing b) Numeric Logic Programming c) Network Learning Protocol
2	Which of these is a common use of NLP?	a) Translating languages automatically b) Building bridges c) Cooking food
3	Which of these is a challenge for NLP systems?	a) Understanding sarcasm and jokes b) Boiling water c) Building bridges

3.4 Computer Vision

	Quiz Question	Answer Options
1	What is Computer Vision in Artificial Intelligence?	a) Teaching computers to understand and interpret images or videos b) Giving computers the ability to hear sounds c) Making computers write stories
2	Which is the real-world use of Computer Vision?	a) Facial recognition in smartphones b) Making phone calls c) Writing emails

4. Conversation Flows

The DynaTech chatbot follows a simple, linear conversation structure. There are three core flows that every user interaction passes through, regardless of which topic is chosen.

4.1 Welcome & Topic Selection Flow

This is the entry point for all users. It runs once at the start of every conversation.

Step	Description
1 - Greeting	The bot opens with a welcome message introducing itself as the DynaTech AI learning assistant.
2 - Topic Menu	The bot presents the user with a menu of AI topics: Machine Learning, Deep Learning, NLP, Neural Networks, AI Ethics etc. However, the user must prompt the Chatbot for topics.
3 - User Selection	The user taps their chosen topic. This selection routes the conversation to the corresponding topic flow.

4.2 Topic Lesson & Quiz Flow (Repeated for all Topics)

Once a topic is selected, the user enters that topic's dedicated flow. This flow structure is identical across all topics - only the content changes.

Step	Description
1 - Lesson Delivery	The bot sends a short educational message explaining the selected AI topic in plain language.
2 - Question 1	The bot presents the first multiple-choice question with four answer options as quick-reply buttons (A, B, C, D).
3 - User Answer	The user selects an answer option. The bot acknowledges the response and proceeds to the next question.
4 - Question 2	The second multiple-choice question is presented in the same format.
5 - Question 3	The third and other multiple-choice questions are presented.
6 - Completion	After the user answers the final question, the bot displays the closing message: 'Well done, you have completed the quiz.'

4.3 Flow Diagram Overview

The diagram below illustrates the overall conversation flow structure at a high level:

5. Screenshot Examples

5.1 Welcome Message Menu

Shows the chatbot's opening greeting as well as the space to prompt the AI Chatbot.

DynaTech

This AI Educational Chatbot is an interactive learning assistant designed to help beginners understand the fundamentals of Artificial Intelligence in a simple, structured, and engaging way.

+ Ask me anything about AI, Machine Learning, or how it works...

⚡ by Botpress

5.2 Topic Lesson Delivery

Shows the bot delivering the educational lesson after the user has selected a topic, e.g. Machine Learning. The user must prompt the Chatbot to give the topics to learn.

5.3 Multiple-Choice Quiz Question

Shows a quiz question being presented to the user with multiple-choice answer options displayed.

Beginner

Let's start your **Beginner AI Ethics Quiz!**

I'll ask you 3 questions. Just type the letter (A, B, C, or D) for your answer.

Question 1:

What is the main goal of AI Ethics?

- A) To make AI systems faster
- B) To ensure AI is used responsibly and fairly
- C) To teach robots how to dance
- D) To create more powerful computers

What's your answer?

b

Correct! 🎉 The main goal of AI Ethics is to ensure AI is used responsibly and fairly.

Question 2:

Which of these is an example of bias in AI?

- A) An AI that always gives the same an. ↓
- B) An AI that favors one group of people over another

+ Ask me anything about AI, Machine Learning, or how it works...

5.4 Quiz Completion Message

Shows the final message displayed after the user answers the last quiz question: 'Well done, you have completed the quiz.' For Example, here it says "Great job completing the Beginner AI Ethics Quiz!"
