

DynaTech: AI Fundamentals Educational Chatbot

1. Implementation Approach & Platform Selection

DynaTech is an AI educational chatbot designed to simplify complex AI concepts for beginners. It uses structured Q&A; pairs, conversation flows, and natural language processing to deliver clear explanations.

Platform Justification: A no-code chatbot platform was used due to ease of use, fast deployment, and built-in NLP capabilities.

2. Implemented Q&A; Pairs

What is AI? – AI is the ability of machines to perform tasks requiring human intelligence.

What is Machine Learning? – ML allows systems to learn from data.

What is Deep Learning? – A subset of ML using neural networks.

What is NLP? – Enables machines to understand human language.

What is Computer Vision? – Allows machines to interpret images.

What are LLMs? – Models trained on large text data.

What is AI vs ML? – ML is a subset of AI.

What is ML vs Deep Learning? – Deep Learning uses complex networks.

Where is AI used? – Healthcare, finance, education.

What is AI bias? – Unfair outcomes due to biased data.

What is AI ethics? – Responsible AI usage.

What is data privacy? – Protecting user data.

What are NLP challenges? – Context and ambiguity.

How does AI learn? – Through data patterns.

What is a Neural Network? – Brain-inspired system.

3. Conversation Flows

Flow 1: Learn about NLP

Definition → Applications → Challenges → Follow-ups

Flow 2: Explore AI Ethics

Overview → Bias → Privacy → Further Learning

4. Screenshots

Insert screenshots of chatbot interface, NLP flow, and AI Ethics flow here.

User Guide: DynaTech Chatbot

Getting Started

Open the chatbot and type a question like 'What is AI?'

Example Commands

What is AI? | Learn about NLP | Explore AI Ethics

Follow-up Questions

Ask things like 'Explain more' or 'Give examples'.

Tips

Ask clear questions and follow suggested topics.

Error Handling

If the chatbot does not understand, it will ask you to rephrase.
